

SELECT Cutaway

TUTORIAL

Applique Technique

Use Select Cutaway for creating a heat sealed edge on your turned edge applique pieces. The result is a durable applique piece that can be stitched into place with hand or machine stitching with no fear of the edge peeking out! Follow these easy steps for this exciting applique technique:

1. Trace or draw the applique image on to the fusible side of Select Cutaway.

2. Rough cut around the outside edge of the image.

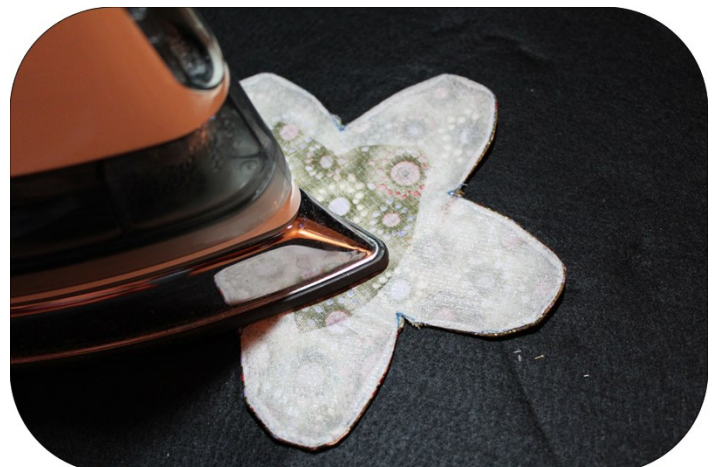

3. Lay the stabilizer over the applique fabric – non-fusible side to right side.

4. Using a short stitch length, stitch on the lines of the traced image.

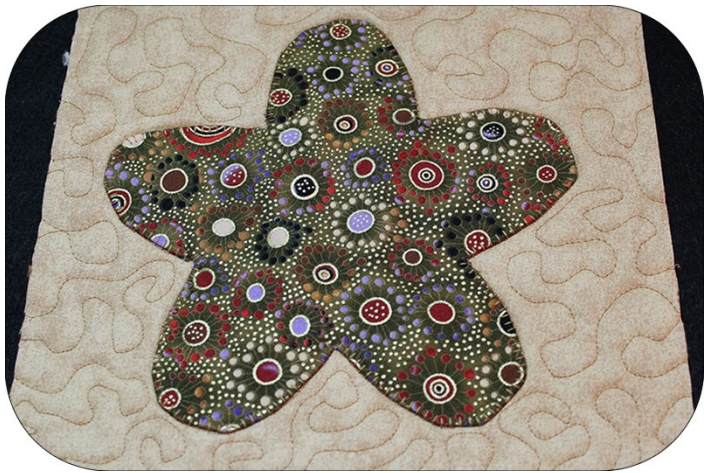

5. Once stitching is complete - trim excess fabric along the outside edge to within 1/8".

6. Cut a pocket in the stabilizer and turn – trim as much of the stabilizer as you like but leave at least 1/2" of the stabilizer to within stitching line.

7. Using a medium temperature on your iron, press all the way around to seal the edge with the stabilizer

8. Applique into place on your quilt block or project of choice! *Tip – Select Appli-Web is ideal for securing the applique while you stitch!
